Phone: 888-733-9674 Fax: 888-886-2486

Patient: DOE, JOHN (M)

Exam Date: 12/27/2013

MRN : JD1004

DOB: 07/08/1987

Location :

Room:

Referring Physician: XMRI, SECOND OPINION

FAX: 888-886-2486

CR OF THE CERVICAL SPINE 2 OR 3 VIEWS

CLINICAL HISTORY: Neck pain.

COMMENTS:

AP, lateral and open mouth views show no spondylolisthesis. There is visualization to T1 vertebral body.

Soft tissue structures are intact.

Mild compression deformities are noted involving vertebral bodies.

There is straightening of normal cervical lordosis is seen, compatible with muscular spasm

Moderate multilevel degenerative changes are noted. This is demonstrated by osteophytosis, endplate sclerosis and moderate loss of disk space height.

IMPRESSION:

1. Straightening of normal cervical lordosis, compatible with muscular spasm.
2. Mild compression deformities are noted involving several vertebral bodies as above.
3. Moderate to severe multilevel degenerative changes, most prominent at C5-C6.
